PROJECTS

E-COMMERCE WEBSITE (mini project) - feature rich e-commerce website for grocery shop
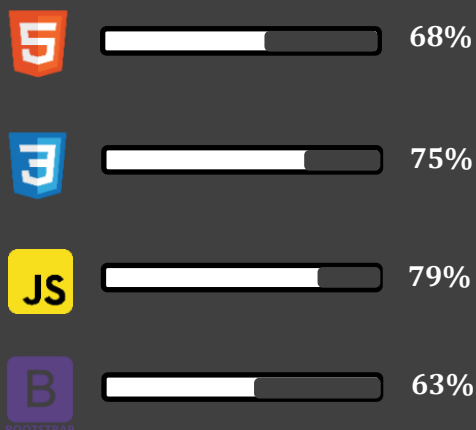

MODULES

➤ User Side
➤ Admin Side

- **Search for product :** The site provides a facility to search for the desired products. The search can be done on the basis of the category name, sub category name, brand and name of the product.
- **Percentage offer :** Every product in the web site has a good percentage offer. Through this offer users can buy the products they want in an affordable price.
- **Similar product :** When the user selects a product, he can see the products similar to the selected products. They can be seen on the bottom of the single product page.
- **Add to cart:** The user can add the desired products to the cart to buy them. In order to add the product to the cart the user have to enter the quantity of the product. More than one product can be added to the cart. And also, the user can update the cart by deleting the unwanted products.
- **Payment facilities**
- **Product review**
  - ➤ **IDE :** Visual Studio Code
  - ➤ **Front End Technologies :** HTML, CSS, JavaScript
